FOREWORD TO THE REVISED EDITION

This compilation was originally prepared under the auspices of a special committee of the Experiment Station Section of the Association of Land-Grant Colleges and Universities, consisting of the following members: Mr. J. T. Jardine, Chief of the Office of Experiment Stations, chairman; Vice Director A. Boss of the Minnesota Experiment Station; Director S. B. Doten of the Nevada Experiment Station; and Director B. E. Gilbert of the Rhode Island Experiment Station. First issued in July 1933, it has now been extensively revised and enlarged. A considerable number of additional institutions have been listed, largely as a result of information supplied by the Minnesota Experiment Station; Les Institutions d'Expérimentation Agricole dans les Pays Tempérés (1933), Les Institutions de Laiterie dans le Monde (1934), and other publications of the International Institute of Agriculture at Roma; data derived from reports and other publications from the institutions themselves; and numerous other sources. A few institutions previously included have been omitted.

The total number of institutions listed includes about 400 which are classified as "primary research centers." These institutions are deemed outstanding as to agricultural research or library facilities, and it is believed should merit primary consideration in a general distribution of experiment station publications. The "additional" list now includes about 1,000 institutions and again provides opportunity for a more extensive distribution, especially along subject-matter lines. The fact should be emphasized that many of the institutions in this group are of much importance in specialized fields.
